

EG FUEL LEVEL RESETTER

The EG FLR v2.6 fuel level indicator emulator is designed for a wide range of cars with a resistive petrol level sensor with one signal wire and a gas supply system installed, in which the petrol level indicator drops while driving on gas and does not reset automatically after restarting the engine.

The emulator sets the actual value of the petrol level indicator in the tank after restarting the engine (emulation of vehicle refueling).

DIMENSIONS: 18 x 73 x 8mm

TECHNICAL DATA:

- Operating temperature: from -40°C to +120°C.
- Product dedicated to cars with LPG installation
- Update of petrol level in the tank
