

EG Magic Power

The EG Magic Power reducer is designed to service high-power engines. The evaporator has one gas outlet for a 12 mm diameter hose and supports a power of 250 HP, but it is possible to use an additional outlet connector, then the maximum power that the evaporator can handle is 450 HP.

The compact size allows for easy installation in a variety of vehicles while maintaining high efficiency and reliability.

The EG Magic Power regulator features improved gas flow and an optimized thermal management system, resulting in better control over gas pressure and increased component life. It is ideal for installation in passenger cars and delivery vehicles with powerful engines.

DIMENSIONS: 115x65mm

TECHNICAL DATA

- For engines up to 450 HP
- Easy to install, it can be placed in the vehicle in any position
- Adjustable pressure in the range of 0.8 – 1.6 bar
- Adjustable coolant outlet
- Gas input: copper pipes with a diameter of 8 mm (M12x1 threaded entry).
- Using the centrifugal effect to separate the liquid phase of LPG.

- Increase the surface of the heat exchanger thanks to its optimized design
- Inlet pressure compensation
- Zint integrated safety valve
- NTC sensor 4.7 kΩ
- Two-piece handle for hassle-free placement
- Homologation: E8 67R02/02 11748 03
